Functional Requirements of Food Ordering Application System

Objective

The objective of a food ordering application system is to provide a convenient and efficient platform for users to order food from restaurants or food establishments. The system aims to simplify the process of food ordering, enhance user experience, and streamline the overall operation. The system will offer users a convenient way to browse menus, customize their orders, and place them with just a few clicks or taps. It eliminates the need for traditional phone calls or physical visits to the restaurant. Overall, the food ordering application system will create a user-friendly platform that simplifies the food ordering process, enhances user experience, and benefits.
